DETAILED ACTION

1. Claims 1-5 have been cancelled.
2. Claims 6-10 have been added.
3. Claims 6-10 are pending.

Claim Objections

This application is in condition for allowance except for the following formal matters:

Claim 10 is objected to under 37 CFR 1.75(c), as being of improper dependent form for failing to further limit the subject matter of a previous claim. Applicant is required to cancel the claim(s), or amend the claim(s) to place the claim(s) in proper dependent form, or rewrite the claim(s) in independent form.

Claim 10 cannot depend upon itself. Therefore, claim 10 must depend from one of the above claims.

Prosecution on the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11,453 O.G. 213.

A shortened statutory period for reply to this action is set to expire **TWO MONTHS** from the mailing date of this letter.

Allowable Subject Matter

4. **Claims 6-10** are allowed.
5. The following is an examiner's statement of reasons for allowance: The present invention is directed toward a login authentication system allowing a user to securely

use a business system and a commercial service system, enabling concurrent utilization of one account by multiple people. Each independent claim identifies the uniquely distinct feature **“the commercial service system including financial information configured on the basis of the passwords sent from the business system, whereby the financial information includes a plurality of passwords different from each other to permit use of information in one account by a plurality of the users”**.

The closest prior art, Kung (US Patent No. 5,241,594) discloses a method and apparatus for multiple one-time logons within a distributed computing system, wherein the users do not use the same sensitive information at the same time, either singularly or in combination, fail to anticipate or render the above underlined limitations obvious. The closest prior art, Lamport (Password Authentication with Insecure Communication), discloses a one-way function to encode passwords for multiple users, either singularly or in combination, fail to anticipate or render the above underlined limitations obvious.
